

GET TO KNOW YOUR ENDEAVOUR

We recommend you set up your Endeavour Tent at home before your first trip with it. That way, you'll be familiar with the process and parts involved, making the set-up at your destination easier.

Your storage bag should include the following:

- Endeavour tent body (one piece)
- Two shock-corded pole sets
- Stakes and guy lines

SET UP

1. (NOT PICTURED) Pick a well-drained, level spot. Make sure it's clear of debris that could damage the floor. Ensure that trees and shrubs won't rub against the shelter. Check for standing dead trees or broken tree limbs that might fall on the shelter.
2. Assemble the two pole sets. Make sure each ferrule is fully inserted so the poles won't be too long.
3. (NOT PICTURED) Spread out the shelter with the floor-side down and the roof on top.
4. Insert the ends of the longest poles into the grommets at the tent corners. Ensure the transparent plastic ball socket fittings on the poles are at the front (door) end of the tent.
5. Attach the pole clips (5a) and the roof top clip (5b).
6. Thread the short, crooked pole through the sleeve over the door.
7. Clip the balls at the ends of the short pole into the ball socket holders on the long poles.
8. Stake out the four corners of the tent and vestibule. For the best hold, lean the stakes about 45 degrees away from the tent (8a). Clip in and stake out guy lines as needed for stability and ventilation (8b).
