

GET TO KNOW YOUR FRONTENAC

We recommend you set up your Frontenac at home before your first trip. That way, you'll be familiar with the process and the parts involved, making the set-up easier once at your destination.

Your storage bag should include the following:

- Tent body
- Tent fly
- Shockcorded poles (one six-sided hubbed set, two single poles)
- Stakes and guy lines

SET UP

- 1. (Not Pictured)** Pick a well-drained, level spot. Make sure it's clear of debris that could damage the floor. Ensure trees and shrubs won't rub against the tent. Check for standing dead trees or broken tree limbs that might fall on the tent.
- 2.** Assemble the poles. Make sure each ferrule is fully inserted so the poles won't be too long.
- 3.** Spread out the tent body with the floor-side down. Stake out the six cord loops. For the best hold, lean the stakes about 45 degrees away from the tent. Pull the sides tight enough to be straight, but not so tight that it strains the fabric.
- 4.** Point the two longest poles on the hubbed pole set to the corners furthest from the doors. Insert all six pole ends into the grommets at the tent corners. Run the two single poles **over** the longest hubbed poles and insert the ends into the extra grommets at the door sides.
- 5.** Attach the pole clips. Where the poles cross, attach the double clips to the outer pole, one on either side of the inner pole.
- 6.** Drape the fly over the tent body so the doors on both parts line up. Attach all the hook-and-loop wrap-ties on the underside of the fly to the appropriate places on the poles (6a). Where two poles cross, attach the extra-long wrap-tie around both poles (6b). Clip all the snap fasteners joining the fly to the tent body together. Adjust tension as needed.
- 7. (Not Pictured)** Stake out the door and vestibule loops. Stake out the side peg loops and guy lines as needed for stability and ventilation. You can rig the centre door panel as a porch roof using additional poles (not included), trekking poles, paddles, or lines.
