

GET TO KNOW YOUR LIGHTFIELD

We recommend you set up your Lightfield at home before your first trip. That way, you'll be familiar with the process and the parts involved, making the set-up easier once at your destination.

Your storage bag should include the following:

- Tent body
- Tent fly
- Four shockcorded poles (two long and two short), in their own sack
- Stakes and guy lines

SET UP

- 1. (Not Pictured)** Pick a well-drained, level spot. Make sure it's clear of debris that could damage the floor. Ensure trees and shrubs won't rub against the tent. Check for standing dead trees or broken tree limbs that might fall on the tent.
- 2.** Assemble the two pole sets. Make sure each ferrule is fully inserted so the poles won't be too long.
- 3.** Spread out the tent body with the floor-side down. Stake out the eight cord loops. For the best hold, lean the stakes about 45 degrees away from the tent. Pull the sides tight enough to be straight, but not so tight that it strains the fabric.
- 4.** Cross the two longest (gold) poles at the centre of the tent, with their ends at the four corners. Insert the pole ends into the grommets at the corners. Run the shorter (black) poles **under** the gold poles and insert their ends into the grommets in the grey webbing on the tent sides.
- 5.** Attach the pole clips. Where the poles cross, attach the clip to the **outer** pole.
- 6.** Drape the fly over the tent body so that the doors on both parts line up. Attach all the hook-and-loop wrap-ties on the underside of the fly to the appropriate places on the poles (6a). Where two poles cross, attach the extra-long wrap-tie around both poles (6b). Clip all the snap fasteners joining the fly to the tent body together. Adjust tension as needed.
- 7. (Not Pictured)** Stake out the vestibule loops. Stake out the side peg loops and guy lines as needed for stability and ventilation.
